Business Continuity & Remote Resource Readiness

IMPACT

"We're being forced into the world's largest work-from-home experiment and, so far, it hasn't been easy for a lot of organizations to implement, In a recent webinar snap poll, 91% of attending HR leaders (all in Asia/Pacific) indicated that they have implemented 'work from home' arrangements since the outbreak, but the biggest challenge stems from the lack of technology infrastructure and lack of comfort with new ways of working."

Saikat Chatterjee
Senior Director, Advisory at Gartner

Ready or not, due to the spread of COVID-19 coronavirus, working remotely from any location not only teleworkers but also desk clerks is suddenly an immediate requirement for many. Few organizations feel prepared for large-scale remote work.

Seize the opportunity to strengthen your policies and formulate for future workplace and employee needs.

"Working from home success depends profoundly on whether management trust staffs to do their work even if you can't see them"

Online Threats from Remote Workers

Unsecured Wi-Fi networks: Many workers will be working from their home where they might have secure Wi-Fi. But some may have to use unsecured public Wi-Fi networks which are prime spots for malicious parties to spy on internet traffic and collect confidential information.

Using personal devices and networks: Most workers will be forced to use personal devices and home networks for work tasks. These will often lack the tools built in to business networks such as strong antivirus software, customized firewalls, and automatic online backup tools. This increases the risk of malware finding its way onto devices and both personal and work-related information being leaked.

Scams targeting remote workers: We'll likely see an increase in malicious campaigns targeting remote workers. What's more, with many employees lacking remote work opportunities, we'll no doubt see an increase in the prevalence of work-from-home scams.

DTS Solution may not be able to **enforce** employees' behaviour at home BUT we can certainly **Deep-Inspect** in an organization's **current** setup on:

- **HOW** remote employees are connecting to workplace
- **WHAT** the employees can see, and restrict
- **WHEN** employees does something they shouldn't

DTS Solution to review **People, Processes and Technology** are aligned with business goal and if they are fully utilized or if there is room for improvement for the safety and security of the organization.

Please reach out to our team to initiate a discussion on how we can help you to create a custom plan based on your needs.
